Create github repository with following options

The screenshot displays the GitHub 'New repository' page. The browser address bar shows 'github.com/new'. The page is titled 'New repository · GitHub'. The 'Owner' is set to 'utkarshg1' and the 'Repository name' is 'example', with a green checkmark indicating 'example is available'. A hint suggests 'Great repository names are short and memorable. Need inspiration? How about super-telegram?'. The 'Description (optional)' field is empty. Under 'Visibility', 'Public' is selected with a radio button, and 'Private' is unselected. The 'Initialize this repository with:' section has 'Add a README file' checked. Below this, 'Add .gitignore' is shown with a dropdown set to '.gitignore template: Python'. The 'Choose a license' section has a dropdown set to 'License: Apache License 2.0'. A note states 'This will set main as the default branch. Change the default name in your settings.' At the bottom, a green button labeled 'Create repository' is visible. The Windows taskbar at the bottom shows the time as 11:48 AM on 07-06-2023.

Owner * / Repository name *

utkarshg1 / example

example is available.

Great repository names are short and memorable. Need inspiration? How about [super-telegram](#)?

Description (optional)

☐ Public
Anyone on the internet can see this repository. You choose who can commit.

☐ Private
You choose who can see and commit to this repository.

Initialize this repository with:

☒ Add a README file
This is where you can write a long description for your project. [Learn more about READMEs.](#)

Add .gitignore

.gitignore template: Python

Choose which files not to track from a list of templates. [Learn more about ignoring files.](#)

Choose a license

License: Apache License 2.0

A license tells others what they can and can't do with your code. [Learn more about licenses.](#)

This will set `main` as the default branch. Change the default name in your [settings](#).

📘 You are creating a public repository in your personal account.

Create repository

4 important git commands

git status

git add .

git commit -m "First Commit"

git push

Thank you
